CC

1. NP R Elbow Fracture, DOI 5/10/07

HPI

History & Physical:

Chief Complaint: Right elbow injury. The patient was riding a bike. The pedal came off and he fell sustaining a right olecranon fracture. He has been treated and placed in a splint. This was an isolated injury. He suffered minor abrasions.

Examination

General examination:

Chest - clear. Heart - regular rate and rhythm. Abdomen - soft and nontender. The right hand has no neurovascular problems. It is in a long arm splint. IMAGING STUDIES: Radiographs reviewed of the right elbow from Seton Hospital 05/10/07 and there is a displaced right olecranon fracture.

Assessments

1. Closed fracture of olecranon process of ulna - 813.01 (Primary)

Right olecranon fracture..

Treatment

1. Closed fracture of olecranon process of ulna

ORIF with tension band and K-wires. Risks, benefits and alternatives are reviewed.

Follow Up

7-10 days post-op
